

Population is 5 Gears in a Box

61mm

104mm

52mm

14mm

29mm

$\mu=52\text{mm}$

There are only 5 ways to sample 1
gear from the population

There are only 5 ways to sample 1 gear from the population

- 61mm
- 104mm
- 52mm
- 14mm
- 29mm

The 60% CI is how wide you need to make the "Wings" to ensure 60% of all the samples possible at this size will contain μ

There are only 5 ways to sample 1 gear from the population

IF you want a lower CI% [like 40%] the “Wings” can get smaller. Likewise a higher CI% requires wider “wings”

There are only 10 ways to sample 2
gears from the population

●	●	$(61+104)/2=82.5$
●	●	$(61+52)/2=56.5$
●	●	$(61+14)/2=37.5$
●	●	$(61+29)/2=45$
●	●	$(104+52)/2=78$
●	●	$(104+14)/2=59$
●	●	$(104+29)/2=66.5$
●	●	$(52+14)/2=33$
●	●	$(52+29)/2=45.5$
●	●	$(14+29)/2=21.5$

You can also get smaller
"wings" if you increase
the sample size

There are only 10 ways to sample 3 gears from the population

$\mu=52\text{mm}$

You can also get smaller "wings" if you increase the sample size

There are only 5 ways to sample 4
gears from the population

				57.8
				61.5
				52
				39
				49.8

You can also get smaller
"wings" if you increase
the sample size

There is only 1 way to sample 5 gears
from the population

Until you sample the
whole population and you
have no wings. You are
100% confident that the
population mean is the
sample mean at this point

$\mu=52\text{mm}$
